

CS Email Drafter

Standard Operating Procedure & User Guide

Created by Jc Jeacanie

Version	1.0
Date	May 05, 2026
Created by	Jc Jeacanie
Classification	Confidential — Internal Use Only

1. Overview

The CS Email Drafter is an AI-powered tool that helps shipping operations teams draft fast, accurate, and professional follow-up emails for shipping issues — in any language, for any store domain.

Purpose	Draft shipping follow-up emails quickly and consistently, in the correct language for each store domain, with every case logged for audit and analysis.
Created by	Jc Jeacanie — Virtual Business Support Specialist

1.1 Who This Is For

- Customer Service Agents handling shipping complaints
- Virtual Assistants managing e-commerce store inboxes
- CS Team Leads reviewing team performance and issue trends

1.2 Key Features

- AI email drafting — fills in the full email automatically
- Auto language detection — writes in correct language by store domain (de→German, kr→Korean, nl→Dutch, etc.)
- Bulk drafting — process multiple orders at once from a spreadsheet
- Records & Export — all drafts saved, exportable to Excel
- Import Data — restore records from Excel backup on any device
- Analytics — visual charts of issues by store and category
- Insights — key findings and recommended actions from your data
- DPA-compliant name redaction — customer names hidden by default
- 10 AI providers — Gemini, Groq, OpenAI, Claude, Mistral and more

2. Getting Started

2.1 Accessing the Tool

The tool runs entirely in a web browser — no installation needed. Open the tool URL provided by your team lead.

■ *Recommended browsers: Google Chrome, Microsoft Edge, Firefox.*

2.2 Logging In

- 1. Open the tool URL in your browser
- 2. Enter the team password on the login screen
- 3. Press Enter or click Sign in

■■ **The default password is: default — Change it immediately in Settings after first login.**

2.3 Setting Up Your API Key (First Time Only)

The tool needs an AI API key to generate emails. This is a one-time setup per device.

- 1. Click Settings in the left sidebar
- 2. Scroll to AI Provider — select your preferred provider
- 3. Get a free API key from the provider's website (link shown in Settings)
- 4. Paste the API key in the API Key field
- 5. Click Save all settings

Recommended (Free)	Groq — Get a free key at console.groq.com. No credit card needed. Very fast.
Alternative (Free)	Google Gemini — Get a free key at aistudio.google.com. 1,500 requests/day free.

3. Email Drafter — Single Order

Use this for drafting one email at a time. Best for individual customer cases.

3.1 How to Draft an Email

1. Click Email Drafter in the left sidebar
2. Fill in all required fields (marked with a red *)
3. Click Draft email
4. Review the generated email on the right side
5. Click Copy to copy the email — paste into your email client

3.2 Required Fields

Field	Example	Notes
Customer Name	Janina Kehrstephan	First and last name
Order Number	#10482	Include # if applicable
Store / Domain	de	Type without dot — e.g. de, kr, nl, fr
Shipping Issue	Select from dropdown	Use 'Other' to type a custom issue

3.3 Store Domain Reference

Domain	Language	Domain	Language
de	German	kr	Korean
nl	Dutch	jp	Japanese
fr	French	es	Spanish
uk / us	English	se	Swedish
it	Italian	no	Norwegian
pt / br	Portuguese	pl	Polish
fi	Finnish	dk	Danish

3.4 Shipping Issue Categories

Delivery Issues

- Failed delivery attempt
- Missing house number
- Wrong postcode

- Wrong or incomplete address
- Recipient name issue with the courier
- Remote or unserviced area, unable to deliver

Parcel Status

- Package awaiting customer pickup at parcel locker or post office
- Package returned to sender
- Parcel lost in transit
- Parcel damaged in transit

Regulatory / Customs

- Customs or import issue
- Korea personal identification number required (12-digit ID)

Other

- Select 'Other (describe below)' and type your own issue description

■■ Review every AI-generated email before sending. Always verify the customer name, order number, and issue are correct.

4. Bulk Drafter — Multiple Orders

Use when you have multiple cases to handle at once. Paste data from a spreadsheet and draft all emails in one click.

4.1 Column Format

Column Order	Name → Order # → Store (.de/.kr/.nl...) → Issue → Notes (optional)
--------------	--

■ Copy directly from your spreadsheet using Ctrl+C — tabs are added automatically.

4.2 How to Use Bulk Drafter

1. Click Bulk Drafter in the left sidebar
2. Copy rows from your spreadsheet (Ctrl+C)
3. Paste into the text area (Ctrl+V)
4. Enter the store sign-off name
5. Click Draft all emails
6. Wait for all emails to generate (progress bar shown)
7. Review each email — copy individually or click Copy all emails
8. Click Export to Excel to save all drafts

■■ Bulk drafting uses one API call per row. Monitor your API usage if on a limited free tier.

5. Records & Export

Every email you draft is automatically saved to Records. You can view, edit, delete, copy, and export all records from this tab.

5.1 Viewing Records

- Click Records & Export in the left sidebar
- All drafted emails appear in a table sorted by date
- Customer names are hidden by default (DPA protection)

5.2 Revealing Customer Names (DPA)

Customer names are redacted by default to comply with data protection requirements.

1. Click the Reveal names button
2. A confirmation popup appears — read the DPA warning
3. Enter your login password
4. Names are revealed — remember to hide them when done
5. Click Hide names to redact again

■■ Only reveal names when necessary. Always hide them before leaving your workstation.

5.3 Record Actions

Icon	Action	Description
■	Copy	Copies the subject and body to clipboard — ready to paste
—■	Edit	Opens a modal to edit name, order, issue, subject, or body
■■	Delete	Removes the record (asks for confirmation first)

5.4 Export & Clear

- Click Download Excel to export all records as an .xlsx file
- Click Clear all — confirm — then choose to download a backup first or clear immediately

■■ Export regularly as a backup. Browser localStorage data can be lost if cache is cleared.

6. Import Data — Sync Between Devices

The Import Data feature lets you restore or sync records between devices by uploading a previously exported Excel file.

6.1 When to Use Import

- Moving to a new device or computer
- Browser cache was cleared and records were lost
- Sharing records with yourself across multiple devices
- Restoring from a backup after accidental deletion

6.2 How to Sync Between Devices

Step 1 — Export	Records & Export → Download Excel → save the file
Step 2 — Transfer	Send the file to yourself (email, WhatsApp, Google Drive, USB)
Step 3 — Import	Import Data → Choose file → upload Excel → Import records

■ Duplicates (same Order # + Store) are automatically skipped — safe to import the same file multiple times.

6.3 Step-by-Step Instructions

1. Click Import Data in the left sidebar
2. Click Choose file and select your exported Excel (.xlsx) file
3. A preview table appears — green = will import, amber = duplicate (will skip)
4. Review the preview
5. Click Import records
6. Confirmation shows how many were added and how many were skipped

7. Analytics

The Analytics tab shows visual charts built from your drafted email records. Data updates automatically each time you draft a new email.

Section	What It Shows
Stat Cards	Total records, unique orders, stores count, emails this month
By Issue Category	Bar chart — Delivery Issues, Parcel Status, Regulatory, Other
By Store	Which store domains have the most cases
By Specific Issue	Each exact issue type with count and percentage
Peak Calendar	Monthly view — color-coded Low / Mid / High / Peak by volume

■ *Analytics are based on emails you have drafted on this device only.*

8. Insights

The Insights tab analyses your drafted records and surfaces key findings and recommended actions automatically.

8.1 Key Findings

- #1 and #2 problem stores by volume
- Most common issue category
- Top specific issues with counts and percentages
- Parcel status and regulatory case counts

8.2 Recommended Actions

Based on your data, the tool suggests specific next steps such as which store to prioritise, which issue type needs urgent follow-up, and whether to use Bulk Drafter for high-volume repeat cases.

- *Check Insights weekly to spot patterns before they become recurring problems.*

9. Settings

Access Settings from the left sidebar. All settings are saved in your browser and persist across sessions.

9.1 Brand Identity

Setting	Description
Brand / Company name	Your store or company name — shown in sidebar and login screen
Brand emoji	Icon shown in the sidebar header
Default sign-off name	Appears as From name in every email — e.g. 'MrFluffyFriend Team'
Login password	Leave blank to keep current. Change immediately after first setup.

9.2 AI Provider

Provider	Cost	Notes
Google Gemini	Free	1,500 requests/day — aistudio.google.com
Groq	Free	Fastest — console.groq.com — Recommended
OpenAI / ChatGPT	Paid	GPT-4o-mini — platform.openai.com
Anthropic Claude	Paid	Claude Sonnet — console.anthropic.com
Mistral AI	Free tier	console.mistral.ai
DeepSeek	Very cheap	platform.deepseek.com
OpenRouter	Free models	100+ models — openrouter.ai

9.3 Custom AI Instructions

Write rules that are sent to the AI with every email draft. The default instructions are:

- Open with 'Hi [Name]' or 'Hey [Name]' — casual and friendly
- State the issue plainly in plain words
- Keep empathy light and natural
- Ask clearly for what is needed
- Keep body under 80 words
- Always include order number in subject
- Adapt language to customer's region

■ Add store-specific rules, e.g. 'For German customers, use formal Sie pronoun instead of Du.'

10. Data & Privacy

10.1 Where Data is Stored

All records are stored in your browser's localStorage — on your device only. No data is sent to any external server except to the AI API when drafting.

Important

Data is NOT shared between browsers or devices. Each browser has its own separate records.

10.2 Data Persistence

Situation	Records
Page refresh	■ Kept
Close and reopen browser	■ Kept
Open in different browser	■ Not visible
Clear browser cache/history	■ Lost — always backup first
New device	■ Not there — use Import to restore

10.3 API Key Security

- Your API key is stored in browser localStorage — never in the HTML file
- It is cleared from memory when you sign out
- Never share your API key with anyone
- If compromised, revoke it immediately from the provider's dashboard

10.4 Customer Name Redaction

Customer names are hidden by default in the Records table to comply with data protection regulations (DPA/GDPR). A password is required to reveal them. Always hide names when leaving your workstation.

11. Troubleshooting

Problem	Solution
Failed to fetch / network error	Check your API key is saved in Settings. Verify internet connection.
Email drafting not working	Settings → verify AI Provider is selected and API key is entered → Save all settings.
Wrong language in email	Check store domain input. Type 'de' for Germany, not '.de' or 'germany'.
Model not found error	Your provider model may be outdated. Switch to Groq or Gemini in Settings.
Records disappeared	Browser cache may have been cleared. Use Import Data to restore from Excel backup.
Copy button not working	Try a different browser. Chrome and Edge work best.
Password not working	Default password is 'default'. If changed, contact your team lead.
Duplicate (DUP) badge showing	Same Order # + Store exists. Review and delete the duplicate if needed.
Import not working	Ensure you are uploading a file exported from this tool with the correct column names.

12. What Could Be Improved

12.1 Current Limitations

- Data is per-browser only — no cross-device sync without manual export/import
- AI output can vary — always review before sending
- Free AI tiers have daily limits (Gemini: 1,500/day, Groq: varies by model)
- No email client integration — emails must be manually copied and pasted

12.2 Recommended Future Improvements

- Google Sheets sync — share records across the whole team in real time
- Email client integration — send directly via Gmail or Outlook API
- Template library — pre-saved templates for common issue types
- Customer history — see all previous cases for the same order
- Response tracking — mark cases as Actioned, Waiting Reply, Resolved
- Auto-import from Shopify/Gorgias — pull order details automatically

13. Quick Reference Card

Draft a single email	Email Drafter → Fill fields → Draft email → Copy
Draft multiple emails	Bulk Drafter → Paste spreadsheet rows → Draft all → Export Excel
View / edit records	Records & Export → use ■ Edit or ■ Delete per row
Reveal customer names	Records → Reveal names → Enter password → View → Hide
Export records	Records & Export → Download Excel
Import / restore records	Import Data → Choose file → upload Excel backup → Import records
Change AI provider	Settings → AI Provider → select → paste API key → Save
Add custom AI rules	Settings → Custom AI instructions → type rules → Save
Clear all records	Records → Clear all → Confirm → Download backup (recommended)
Change password	Settings → Login password → type new password → Save all settings
