

CS Email Drafter — Shipping Operations Tool

A single-file HTML tool for CS shipping teams. Draft multilingual customer emails, track records, and export to Excel — no server, no install, runs entirely in the browser.

Built by **Jc.**

Features

- **Email Drafter** — single order email with auto-language detection by store domain
- **Bulk Drafter** — paste rows from Google Sheets, draft all emails at once
- **Records & Export** — save every drafted email, export to `.xlsx`
- **Import Data** — restore records from a previously exported Excel file
- **Analytics** — issue breakdown by category, store, and month
- **Insights** — key findings and recommended actions from your data
- **Settings** — customize brand, emoji, sign-off, AI provider, tone, and custom instructions

Supported AI Providers

Provider	Free Tier
Google Gemini	✔ Free
Groq	✔ Free
OpenRouter	✔ Free models
Mistral	✔ Free tier
Cohere	✔ Free trial
OpenAI	✘ Paid
Anthropic Claude	✘ Paid
xAI Grok	✘ Paid
DeepSeek	✔ Very cheap

Provider	Free Tier
Together AI	☒ Free trial

Quick Start

1. Download [cs-tool-generic.html](#)
2. Open it in any browser (Chrome recommended)
3. Log in with the default password: [default](#)
4. Go to **Settings** → set your AI provider + API key → **Save all settings**
5. Start drafting emails

Change the default password in Settings before sharing with your team.

Deploying to Netlify

Host the tool online so your whole team can access it from any browser — no file sharing needed.

Step 1 — Push to GitHub

1. Create a new repository on [github.com](#) (can be private)
2. Upload [cs-tool-generic.html](#) to the repo root
3. Commit the file

Step 2 — Connect to Netlify

1. Go to [netlify.com](#) and sign up / log in (free)
2. Click **Add new site** → **Import an existing project**
3. Select **GitHub** and authorize Netlify
4. Pick your repository
5. Leave build settings blank (no build command needed — it's a plain HTML file)
6. Click **Deploy site**

Step 3 — Set your URL (optional)

1. In Netlify → **Site settings** → **Domain management**
2. Click **Options** → **Edit site name** → set something like [jc-cs-tool](#)
3. Your team accesses it at <https://jc-cs-tool.netlify.app>

Step 4 — Updating the tool

Any time you push a new version of `cs-tool-generic.html` to GitHub, Netlify redeploys automatically within ~30 seconds.

Data & Privacy

- All records are stored in **browser localStorage** — data stays on the user's device
 - No data is sent to any server (except to your chosen AI provider for email drafting)
 - API keys are stored in localStorage and never leave the browser
 - Customer names are hidden by default in Records — password required to reveal
